

Case Study: DSM Demolition Ltd

Eque2 EVision

DSM Demolition Ltd, one of the UK's leading demolition and decommissioning companies established in 1988, has been using Eque2 construction management solutions since 2005 to integrate business activities and manage core financial and project data.

Scalable Solution:

DSM Demolition originally deployed Eque2's Construct for Sage 50 Accounts software in 2005, but as the company grew over the years to now having a turnover of £45m, and part of a Group with a £100m turnover, they required a new solution that could cope with this increase. DSM Demolition once again turned to Eque2 to find a suitable software solution and found Eque2's ERP solution, EVision, was just what they needed.

With great ambitions to grow the business and double Group turnover in the next few years, it was clear that the company needed a solution that provided them with scalability they required. As EVision is built on Microsoft Dynamic NAV, not only does it benefit from continuous investments in research and development, it also provides customers with security knowing that the software is future-proof and can cope with increases in business activities, data and processes.

Aaron Jarvis, Associate Director of Finance at DSM Demolition commented: "Having worked with Eque2 since 2005, we felt reassured that we would get the assistance and support we required when moving solutions. In addition, having looked at the market, Eque2 is more established and secure in comparison to

other ERP solution providers we reviewed which was important to us when selecting a solution that would become core to our business processes."

Customer Requirements:

EVision has provided DSM Demolition with the ability to create more complex reports that have been requested by their clients. Aaron commented: "EVision now houses all our core financial data, and as it is easy to navigate and find the information we need, it has helped us meet our customers' requirements for detailed reporting and in-depth analysis of profits. We are also able to drill down into the data and review contracts and segment by types of clients". The company are looking to further expand their reporting capabilities with the use of

Established in 1988, DSM Demolition offers extensive specialist services nationally and internationally, ranging from credit jobs to multi million pound projects through a well established and valued client base

Jet Reports, a flexible reporting tool allowing you to create bespoke reports, to pull in data from other areas of the business helping them make better informed decisions.

DSM Demolition have also seen significant time savings provided by EVision. They found that with the improved visibility of information, having all information stored in one system, and the easy to navigate solution, their auditing process saved time in some areas and will continue next year.

Implementation

Aaron also commented: "During the implementation process, we realised the importance of working with a consultant that understands your objectives and requirements. The training consultant we worked with went above and beyond to meet our needs and help us. As we were on a tight deadline, the consultant's understanding of this helped us greatly in achieving a successful implementation on time."

Eque2 take pride in being able to support long serving customers with our construction management software solutions as they continue to grow and help them meet their business aspirations.
