EQUE2

Enterprise Contract Management - for Microsoft Dynamics

## Evision and Microsoft Dynamics NAV/Business Central: A powerful partnership

Eque2's construction-specific contract management software, EVision, is built on the Microsoft Dynamics NAV/Business Central platform; it utilises the capabilities of Microsoft's platform whilst adding the specific functionality required by construction companies to maximise efficiency and productivity. Together, the Microsoft Dynamics platform and EVision software offer a powerful tool tailored to your business.

### A familiar platform

*Easy implementation on an interface you know*

As EVision is built on the Microsoft Dynamics NAV/Business Central system, which is familiar to roughly 1 billion computer users around the world, there's no need to spend time getting to grips with a new platform, there's less training time required to bring staff up to speed and, when it comes to recruiting, MS-competent staff are easy to find.

### An integrated experience

*Enjoy access to best-of-breed partners*

Microsoft Dynamics NAV/Business Central offers various add-on solutions designed to integrate seamlessly into the core system and, as EVision is built on the technology of Microsoft, connecting the systems is easy and there's no need to struggle with multiple separate programs. Adding EVision allows you to enjoy even greater industry-specific functionality; for your HR and Payroll needs, for example, utilise leading software provider Miracle Dynamics as part of one streamlined package.

### A single solution

*The construction and contracting lifecycle in one place*

With Microsoft Dynamics NAV/Business Central housing all core business information, the functionality provided by EVision allows you to effectively manage the entire construction and contracting lifecycle. Project management, CVR, subcontractor management and reporting are all streamlined through EVision.

### A future-proof product

*Investment, research and support to keep you ahead of the competition*

EVision is designed to make the most of the architecture and development tools provided by Microsoft Dynamics NAV/Business Central; Microsoft invests around \$9 billion a year on research and development, so you'll always have the latest industry-leading solution thanks to regular updates from companies you can rely on: Microsoft and Eque2.

### Evision and Microsoft

- Real-time control, so projects are completed on time and within budget
- Dashboards tailored per role offer enhanced productivity
- Microsoft Office and SharePoint integration makes sending information fast and easy using Excel and Word
- Informed decision-making is easy thanks to accurate, tailored reporting
- Easily integrate EVision with your existing systems using Eque2's Data Connector
- Access information anywhere, anytime, through any device

Eque2's construction management solution, with Microsoft Dynamics NAV/Business Central at its core, helps you effectively manage your construction projects from start to finish.
